

The Vector Gait and Safety System® is designed to offer the healthcare provider a convenient and versatile solution to mitigate risk, enhance patient outcomes and improve profitability.

As a sophisticated technology, the Vector Elite System requires annual preventive maintenance and servicing by a Bioness authorized technician to continually operate as a high performance device for years to come. Proper routine maintenance of the Vector System helps ensure that it functions as intended, provides trouble-free operation, and prevents future issues. The Vector **Preventive Maintenance Package** (PMP), detailed below, has been developed by Bioness to address the annual maintenance needs for your Vector System.

A daily, quarterly and annual list of minimal routine maintenance procedures to be performed by the facility can be found in the Clinician's Guide.

PREVENTIVE MAINTENANCE PACKAGE OVERVIEW:

Preventive Maintenance:
1 Annual Preventive Maintenance Visit per Year
Complete System Inspection
Wearable Parts Included (replaced or repaired at no additional cost)
System Calibration
Labor & Travel Included (1 visit per year)
Backed by Bioness:
Preferred Remote Technical Support
Service Reports Provided
